

# kiddo-go-relationships

Alana Chigbrow | June 19, 2019

The activity result determines if the day result is true or false.

Activity	
activityId	long
timestamp	Timestamp
activity	String
audioText	File
timer	long
result	boolean

Three or more false (failing) day results will cause a false (fail) week result.

Day Result	
dayId	long
date	Date
activityId	long
weekId	long
dayResult	boolean

Daily and weekly results are passed from Week to Month.

Month Results	
monthID	long
weekID	long
monthResult	boolean

Two or more false (failing) weeks will cause a false month.

Week Results	
weekId	long
weekStart	Date
weekEnd	Date
weekResult	boolean
